PRODUCT RELEASE WEBINAR

2026

.R2

What's ahead

Industrial data synthesized, purpose-built, and within reach. Updates that put the most pertinent metrics in your team's hands.

Mobile dashboards

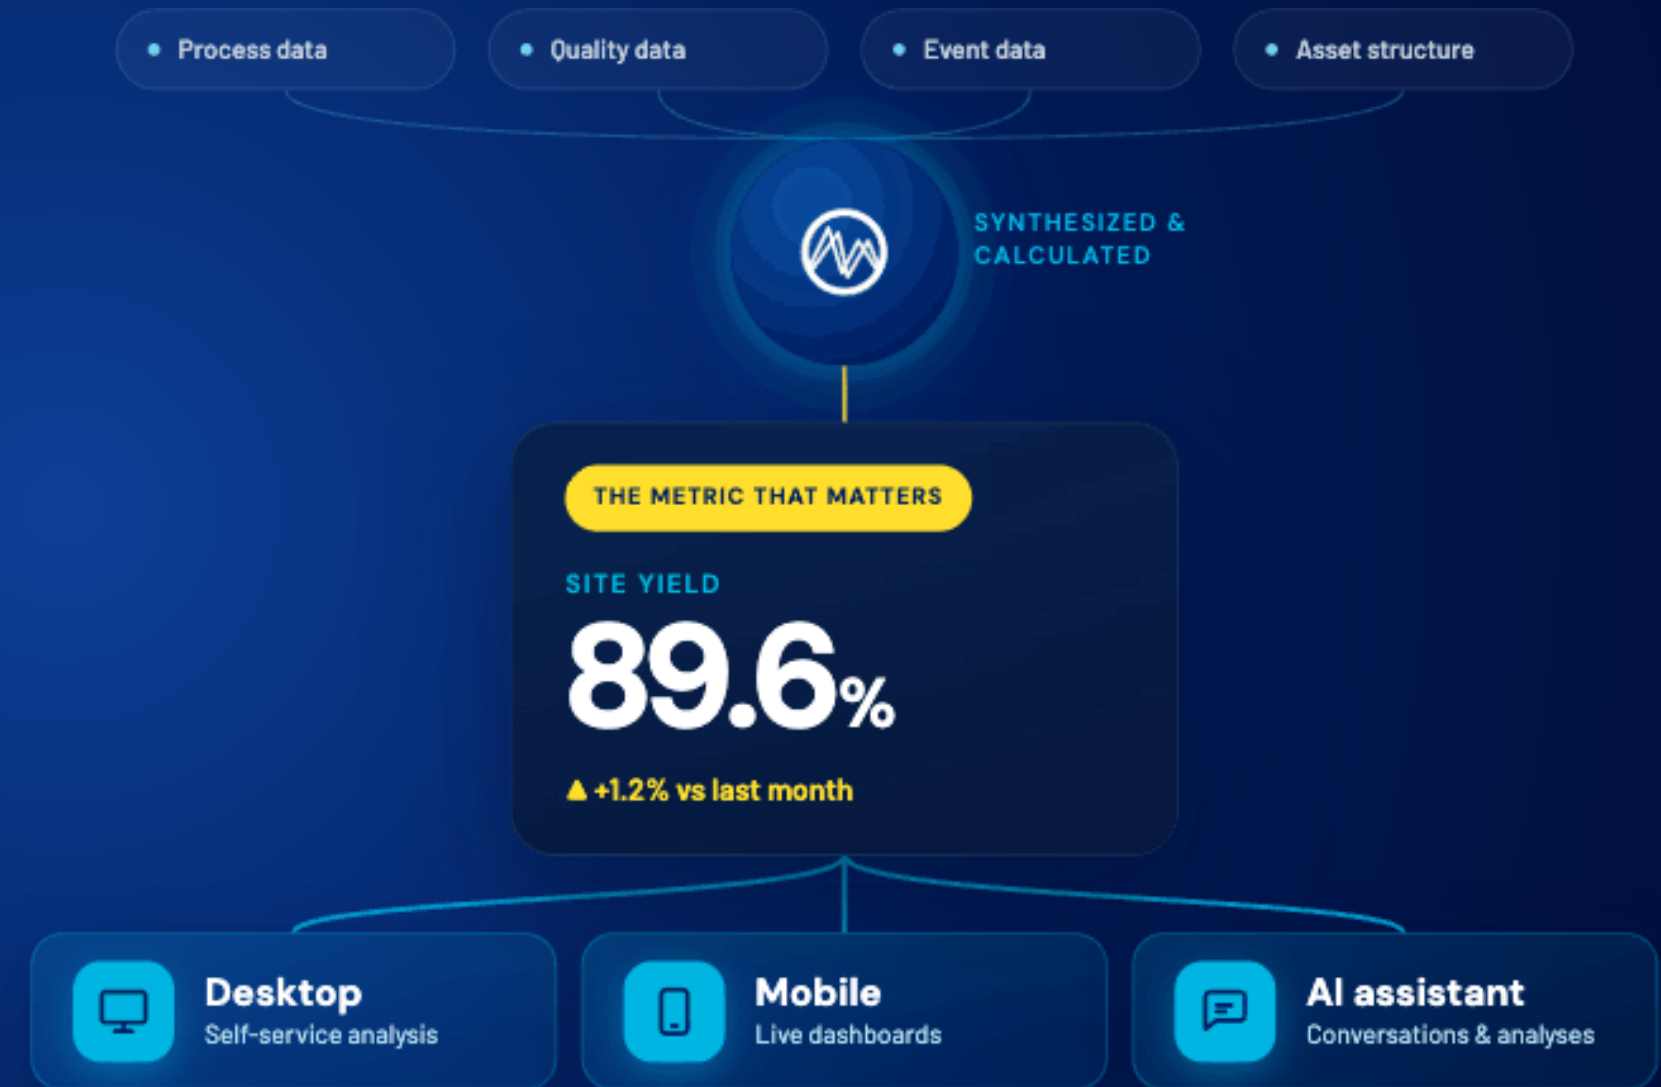

Increased levels of nesting

Connect to your AI assistants

WHAT'S NEW IN 2026.R2

The right metric, built and within **reach**.

This release is about one thing: putting the most pertinent metrics in your hands. Synthesize every source, calculate the signal built for the job, and reach it anywhere — no hunting required.

HIGHLIGHT 01

Connected to your AI assistants

Your process data, reachable from the assistants on every desk.

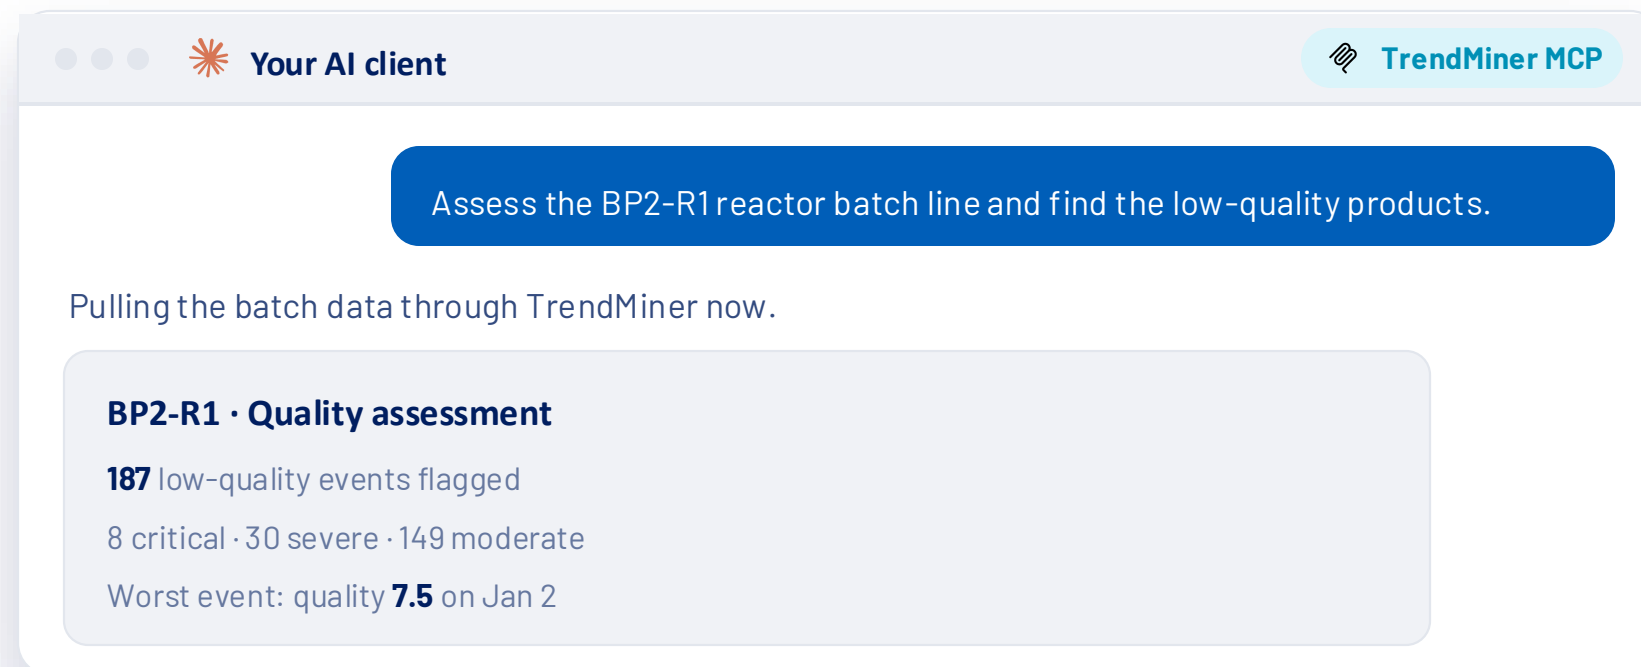

Tim Haselaars

01

TrendMiner as the go-to AI interface for industrial processes

■ OPEN ECOSYSTEM

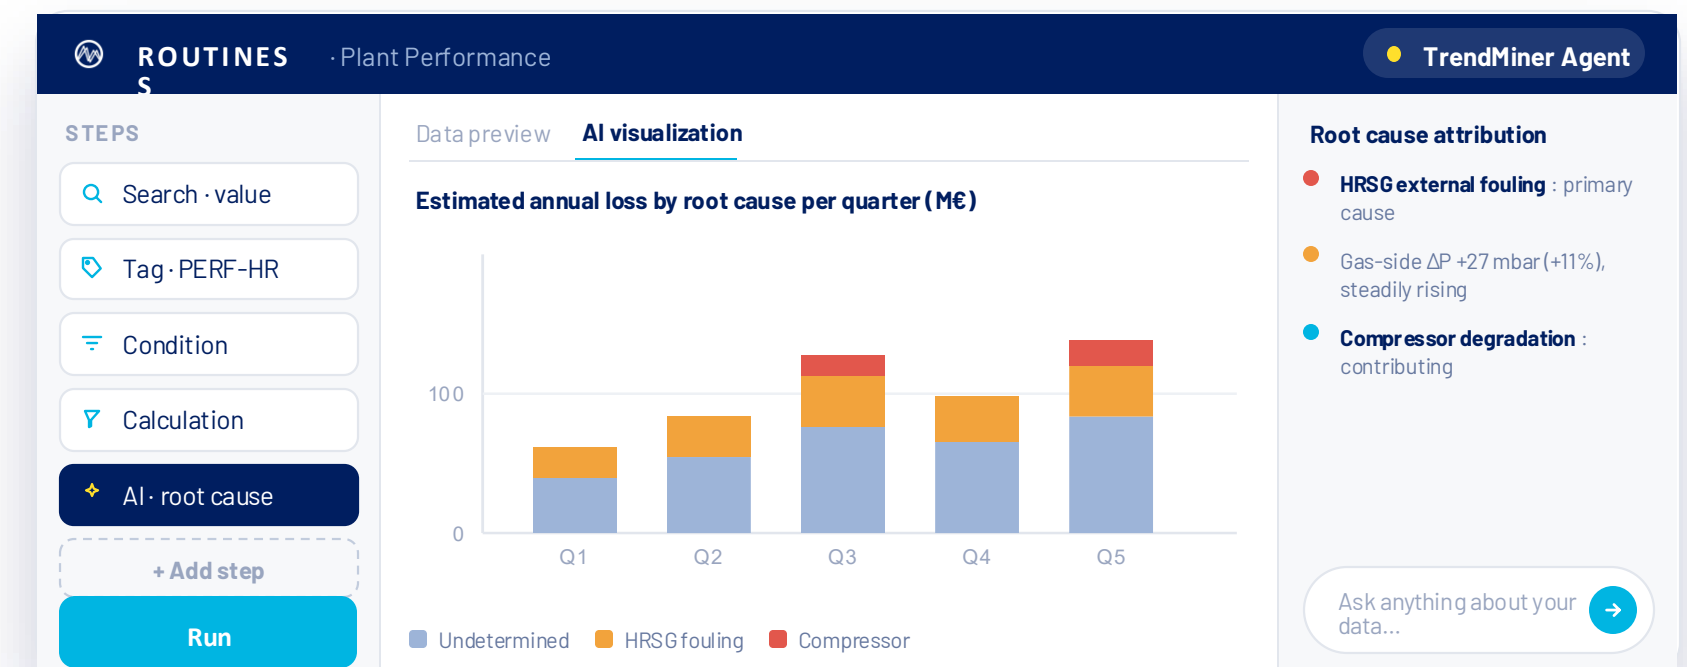

From inside your chosen AI chat application

- Runs in your **approved AI environment**
- Connected across your **apps and platforms**
- Each platform used **fit-for-purpose**

■ NATIVE EXPERIENCE

TrendMiner Agent inside the platform

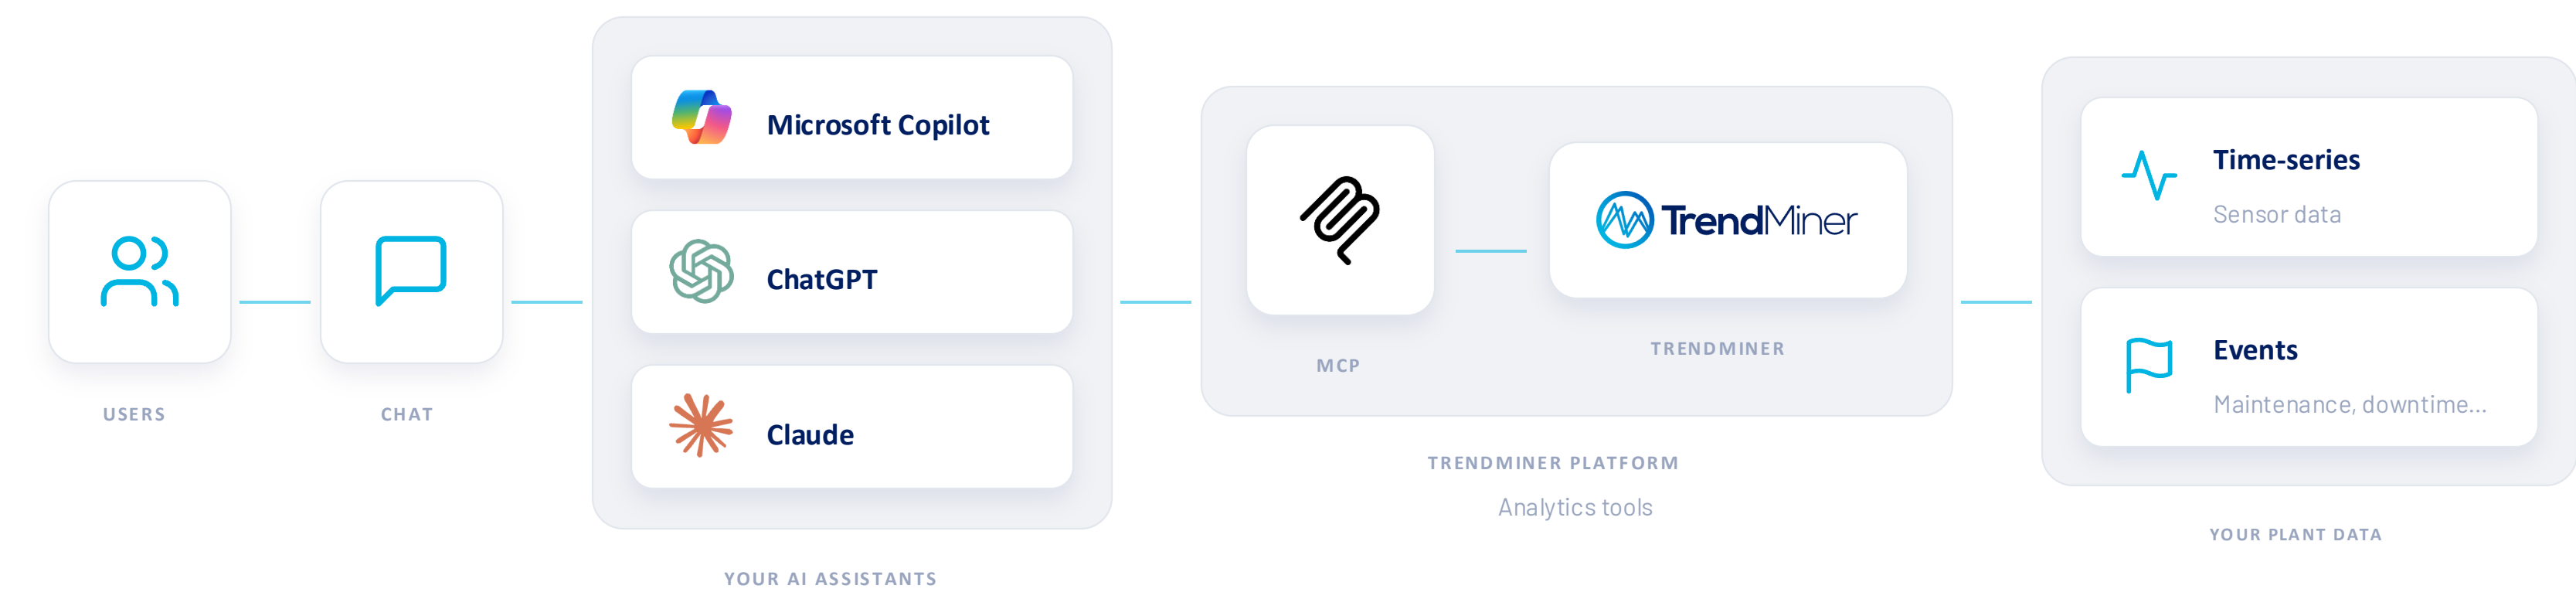

- **Agent embedded** in the platform
- Focused on **time-series insights**
- **Superpowered process analysts**

OPEN BY DESIGN · MCP

EARLY-ACCESS PROGRAM

Bring TrendMiner into Copilot, ChatGPT & Claude

A new Model Context Protocol connector lets the assistants your teams already use query your process data directly – inside your existing access controls.
One open standard, fully inside your permissions and data governance.

FEATURE · MCP

The MCP analytics tools we offer

A growing catalogue of TrendMiner analytics, exposed through MCP — available today, with more on the way.

AVAILABLE NOW

Discovery

- Search tags
- Search assets
- Asset hierarchy
- Tag details

Data & Analysis

- Access tag data
- Value-based search
- Calculations
- Dataset analysis

Visualisation

- Show in TrendHub

ON THE ROADMAP

The catalogue keeps growing. More analytics tools: monitors, fingerprints and event analytics are coming to MCP.

- Search Context Item
- List monitor triggers
- DashHub Building tools
- Similarity & Fingerprint Search

Ask the questions that keep the plant running

The use cases your teams solve every day, now answered by your AI assistant.

Downtime & availability

Count, duration and trend of stops, plus the conditions that preceded them.

“Which reactor stopped most last month?”

Root-cause analysis

What led up to a deviation, and whether it has happened before.

“Has this deviation happened before?”

Batch & quality

Compare against a golden batch and flag abnormal cycles or yield.

“Which batches ran outside the Golden Batch spec?”

Reporting & summaries

Morning reports, shift handovers and periodic performance recaps.

“Give me the overnight report for Line 3, please.”

Monitoring context

Why this alarm is firing, and the current operational state of an asset.

“What’s the status of Reactor 1?”

Process optimization

Parameter-to-yield correlations and recurring inefficiencies.

“Which parameters drive our yield?”

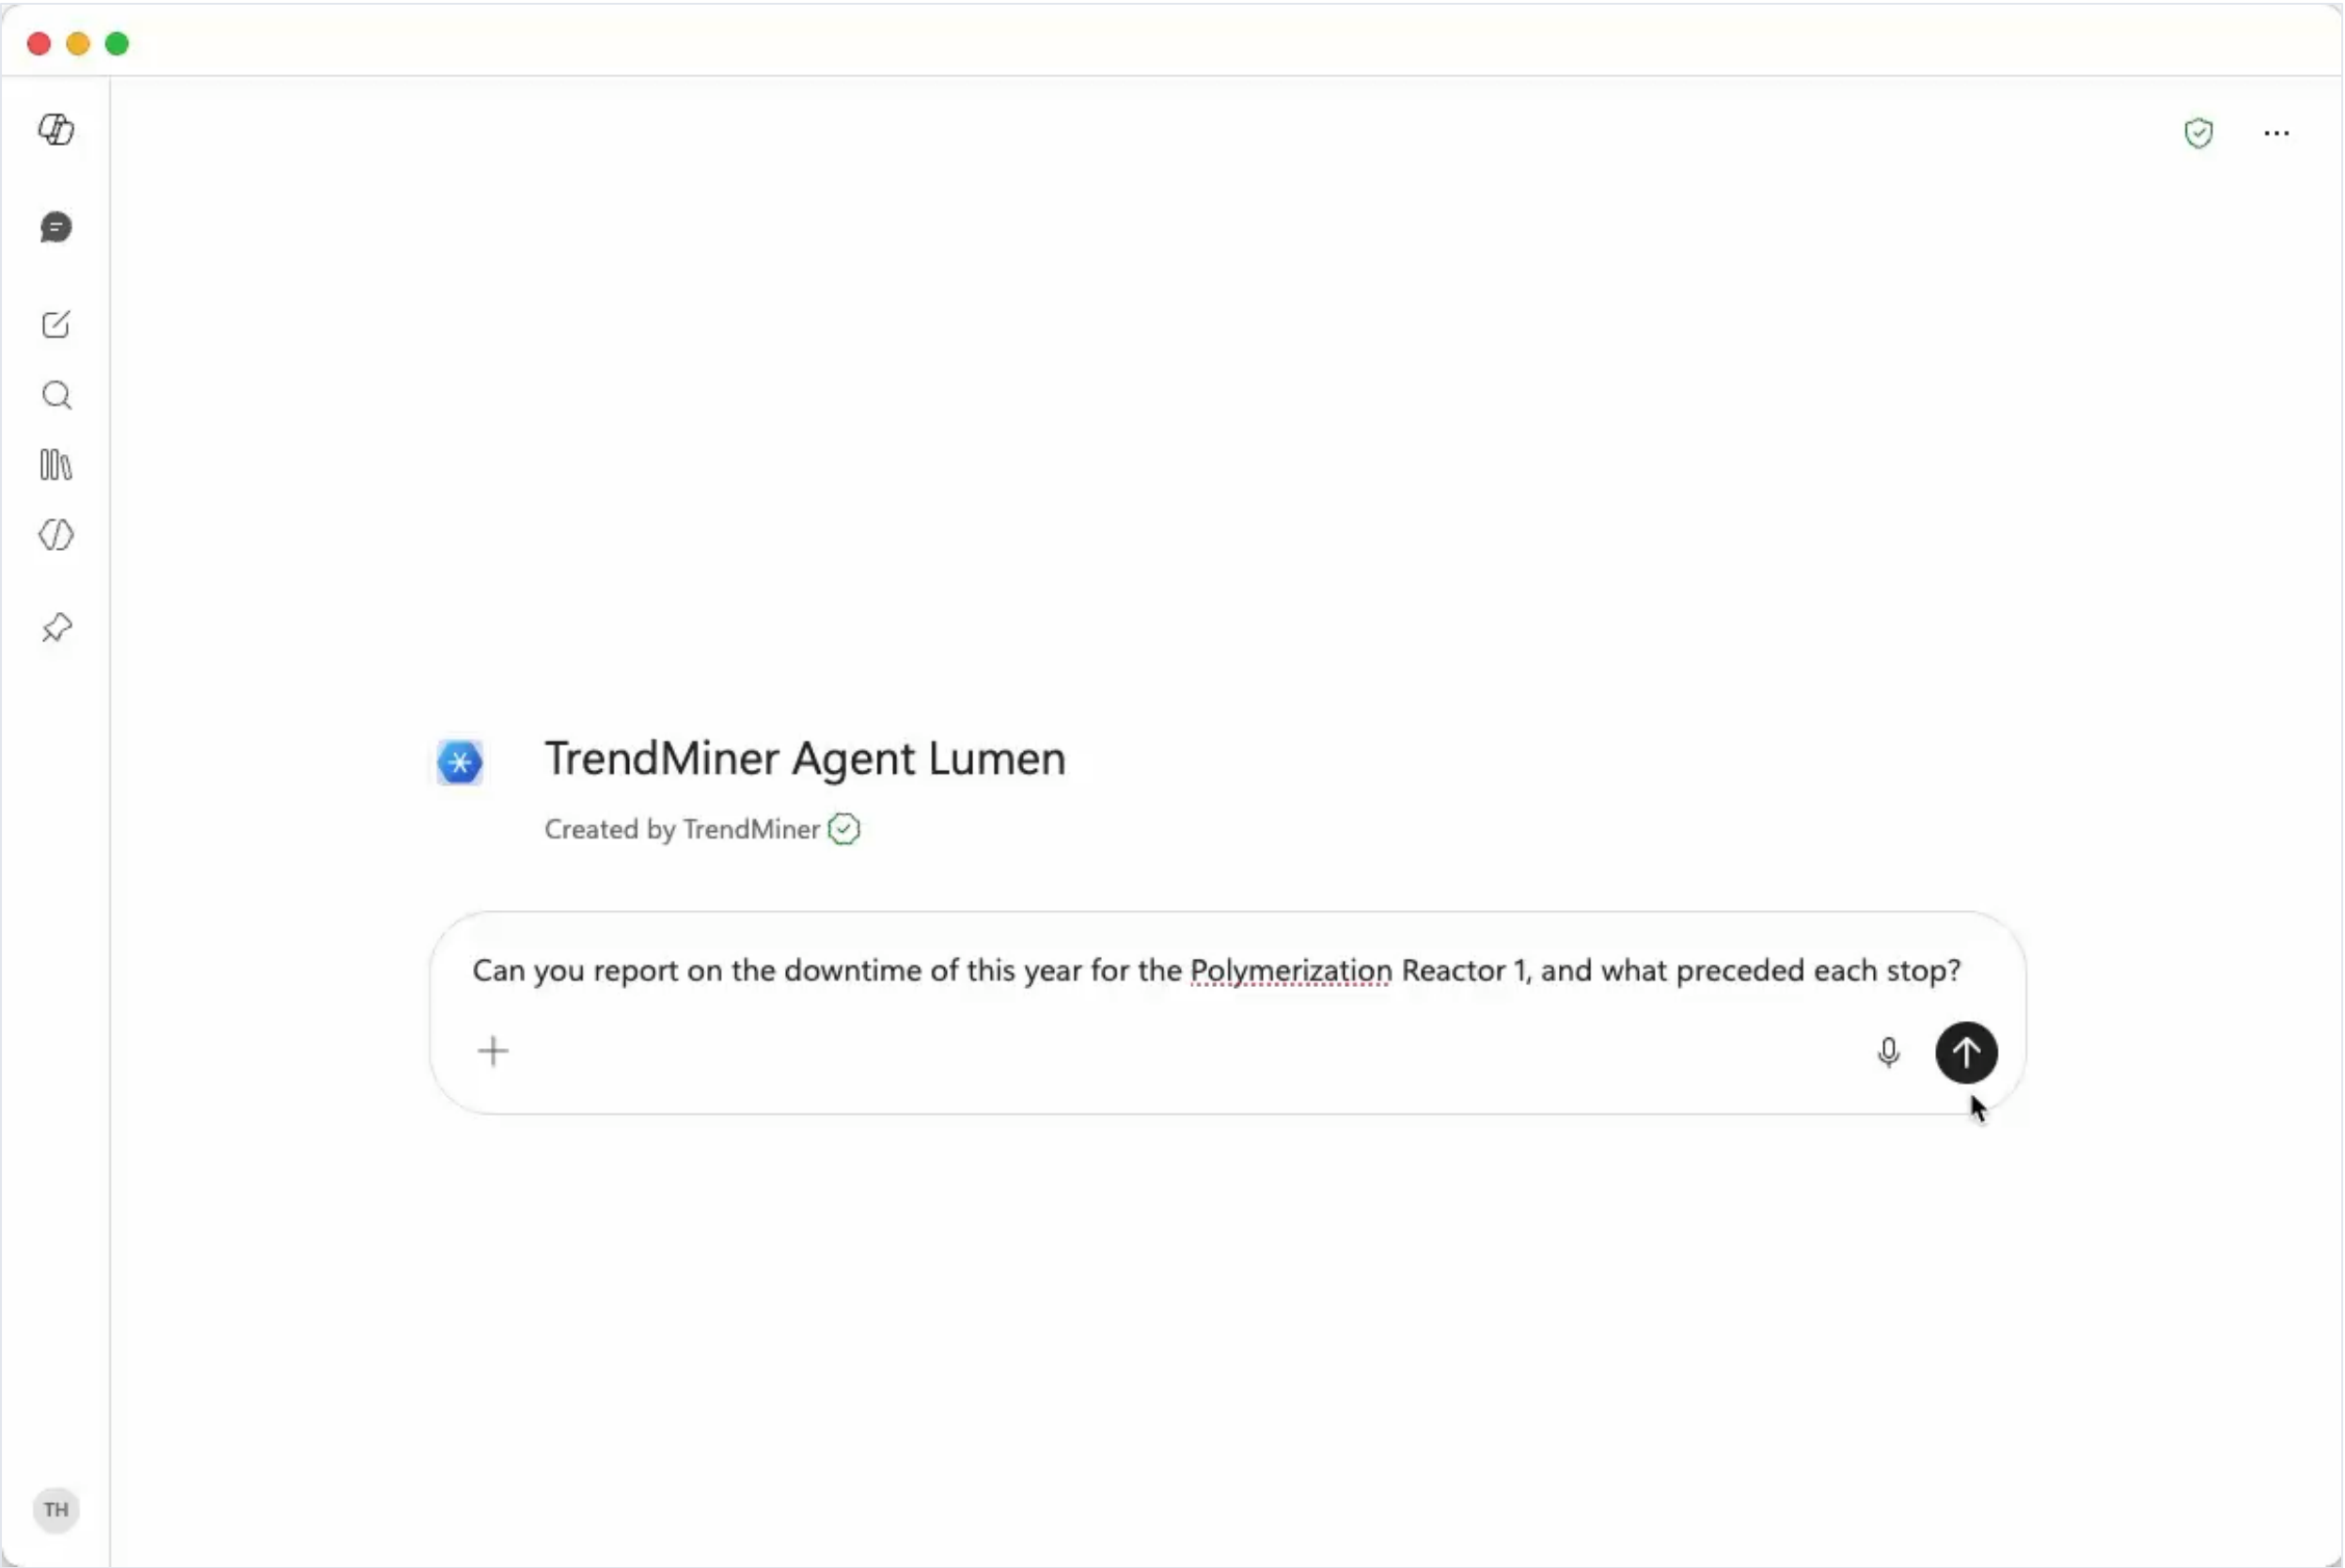

Ask anything...

Ask

DEMO

Just ask questions to your AI assistant

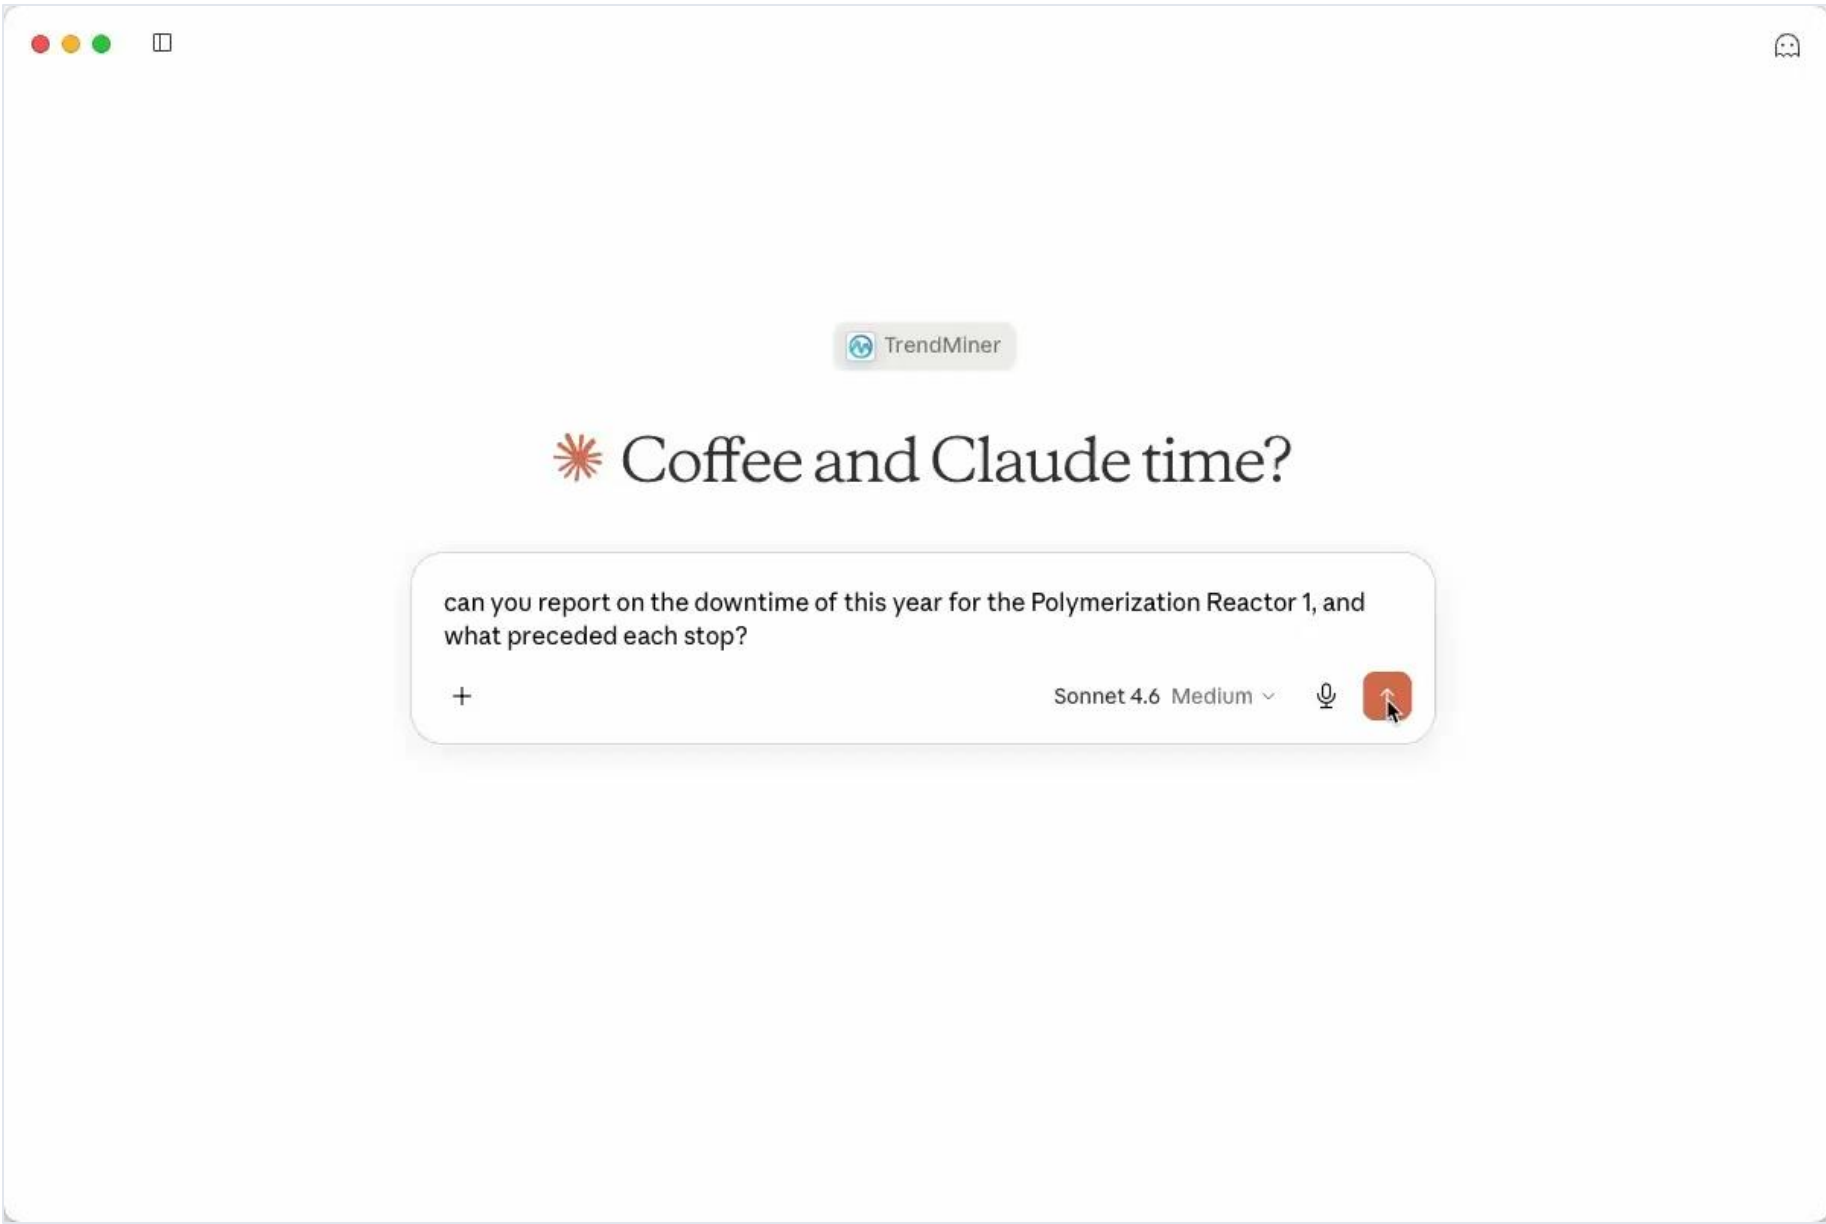

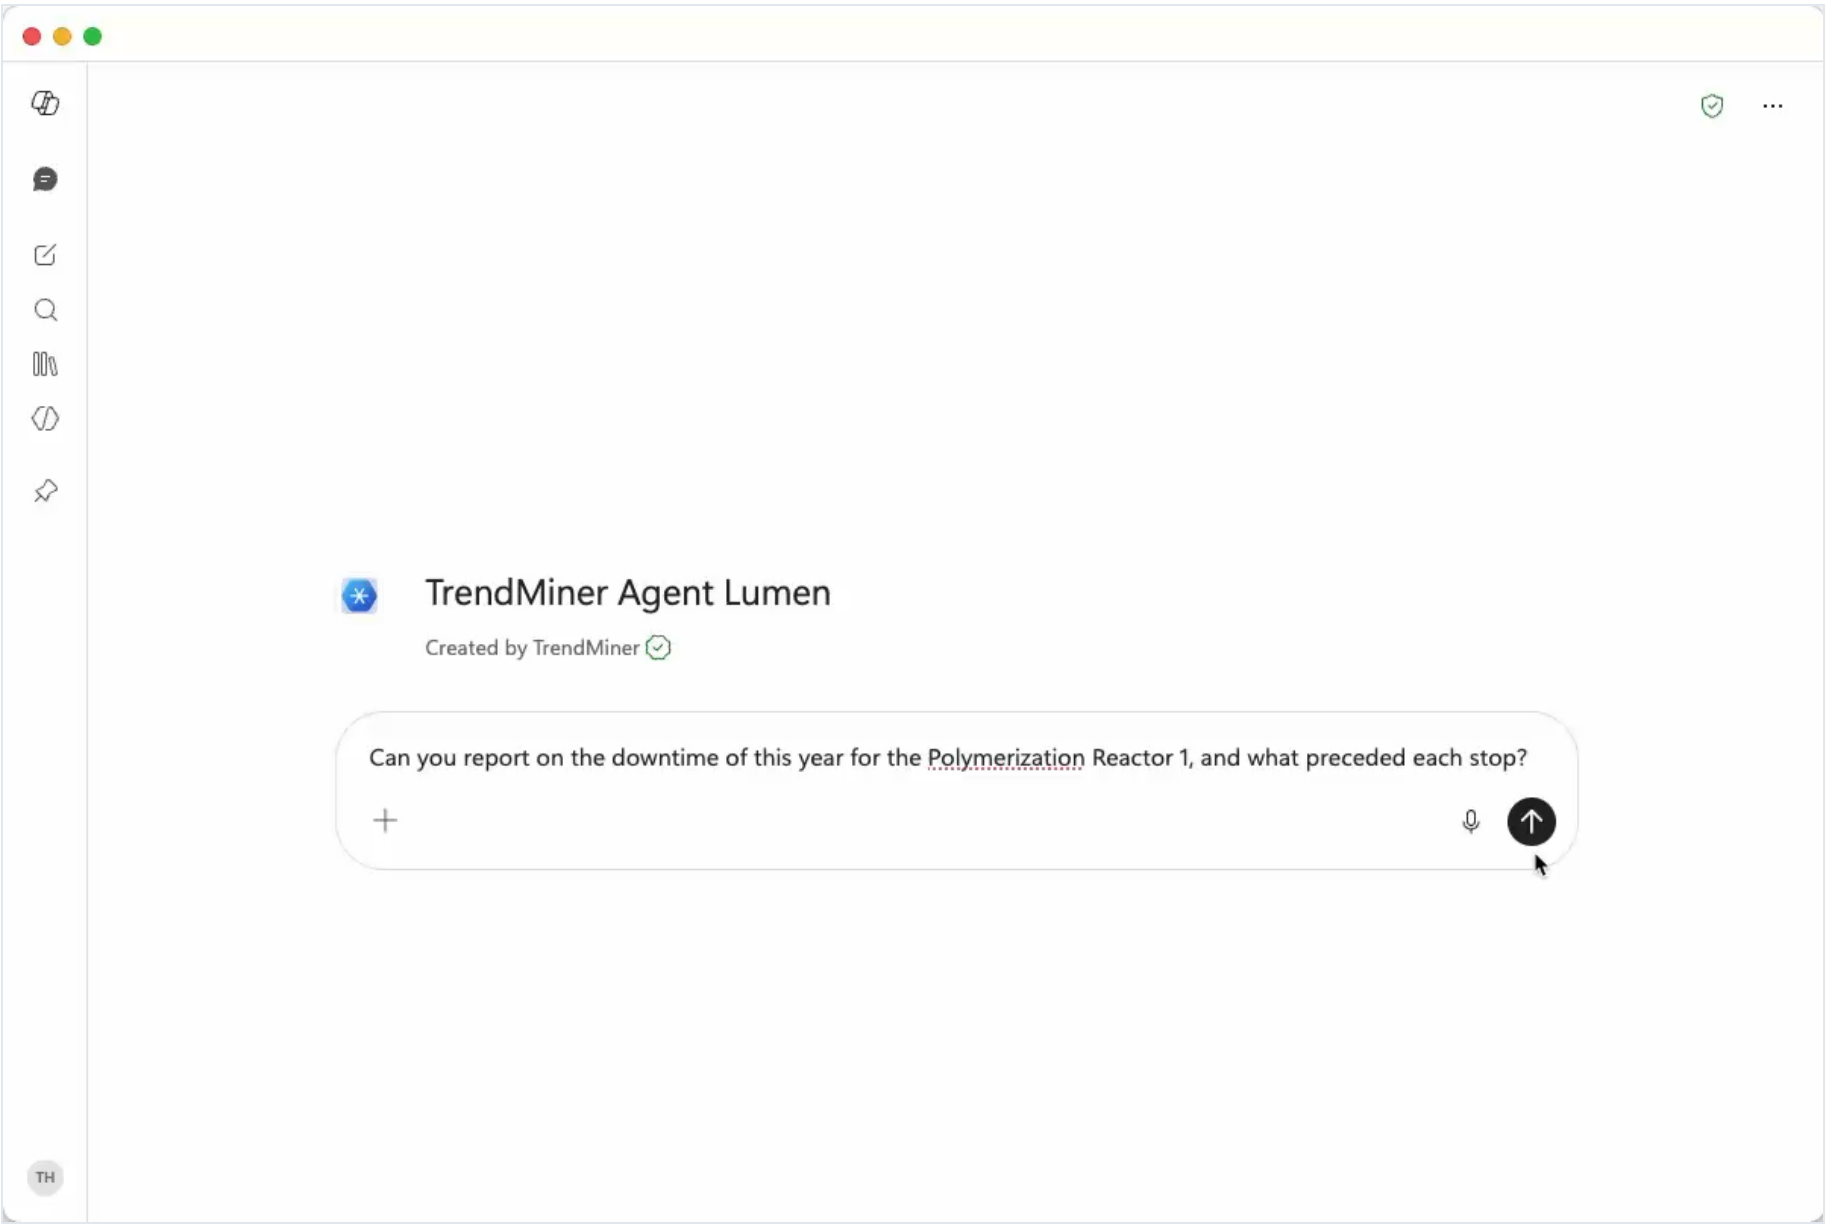

Any question – answered by your AI assistant, using your TrendMiner data through MCP.

DEMO

Same question, Any AI assistant

One process engineer, one question – answered identically in Microsoft Copilot and Claude, grounded in your TrendMiner data through MCP.

HIGHLIGHT 02

Increased levels of nesting

Model your plant the way it's actually built.

Jo Warson

02

CALCULATED TAGS

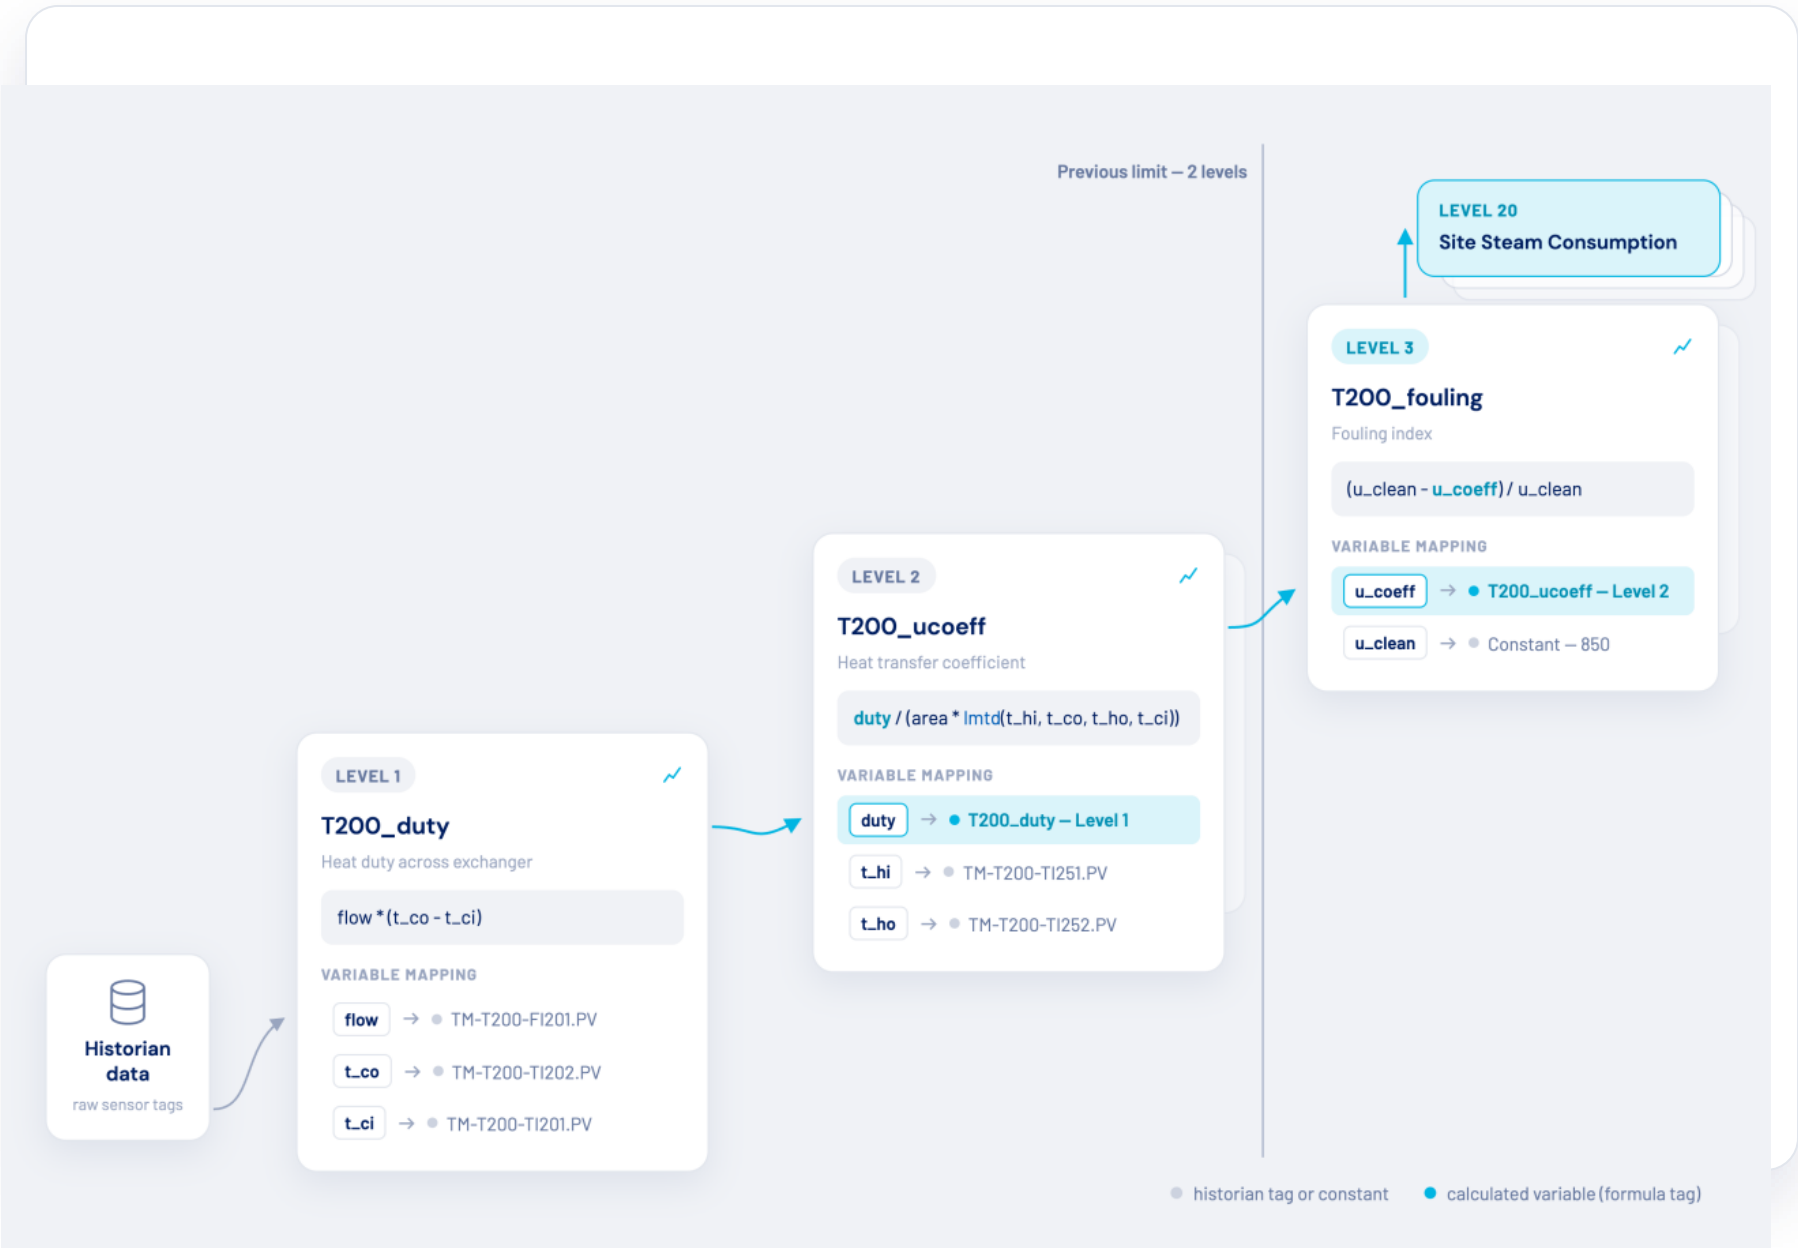

Increased levels of nesting

Build calculations from other calculations, each one its own reusable tag.

20 levels deep
a 10× increase from 2

Each calculation becomes a reusable tag for the next. Stack them as deep as your analysis needs.

- Compose calculations step by step.
- Reuse each tag across TrendMiner
- Refine as your analysis evolves.

FEATURE 03

Mobile dashboards

Your operation, in your pocket.

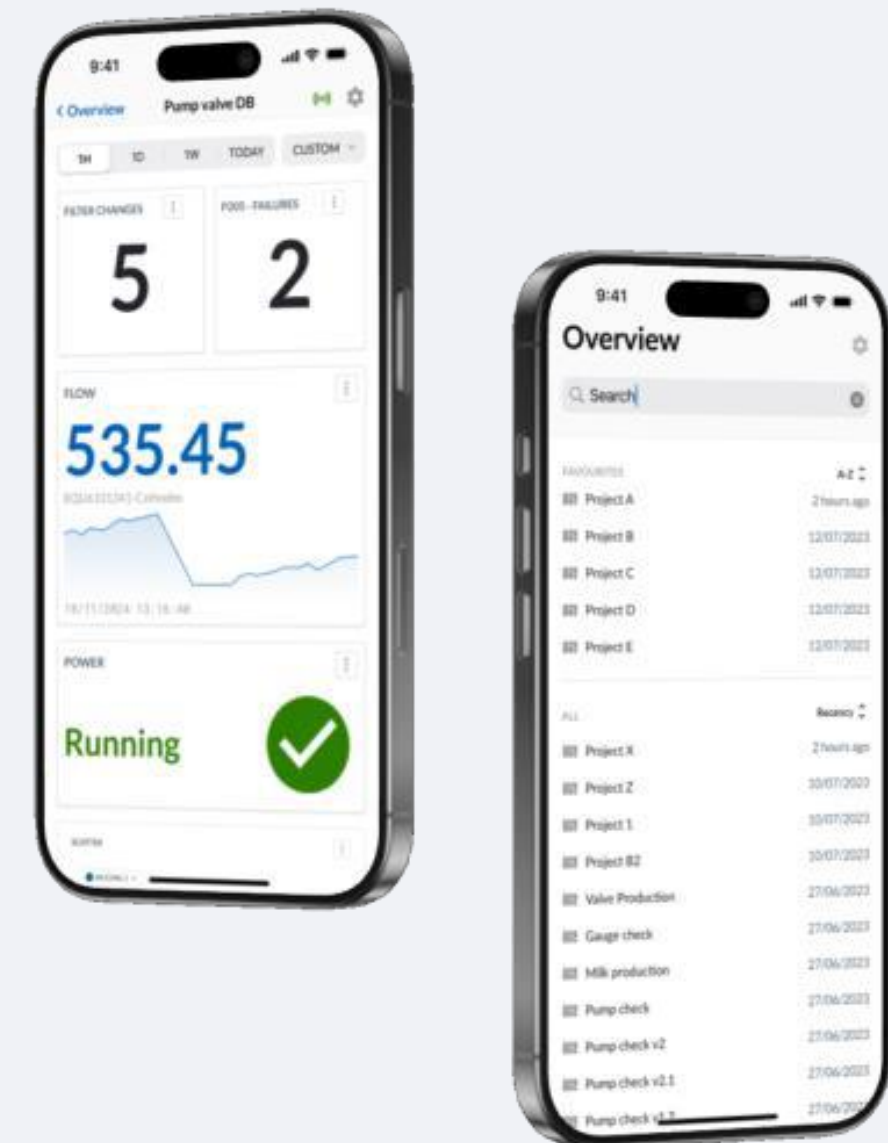

03

MOBILE DASHBOARDS

Access your dashboards when and where you need it

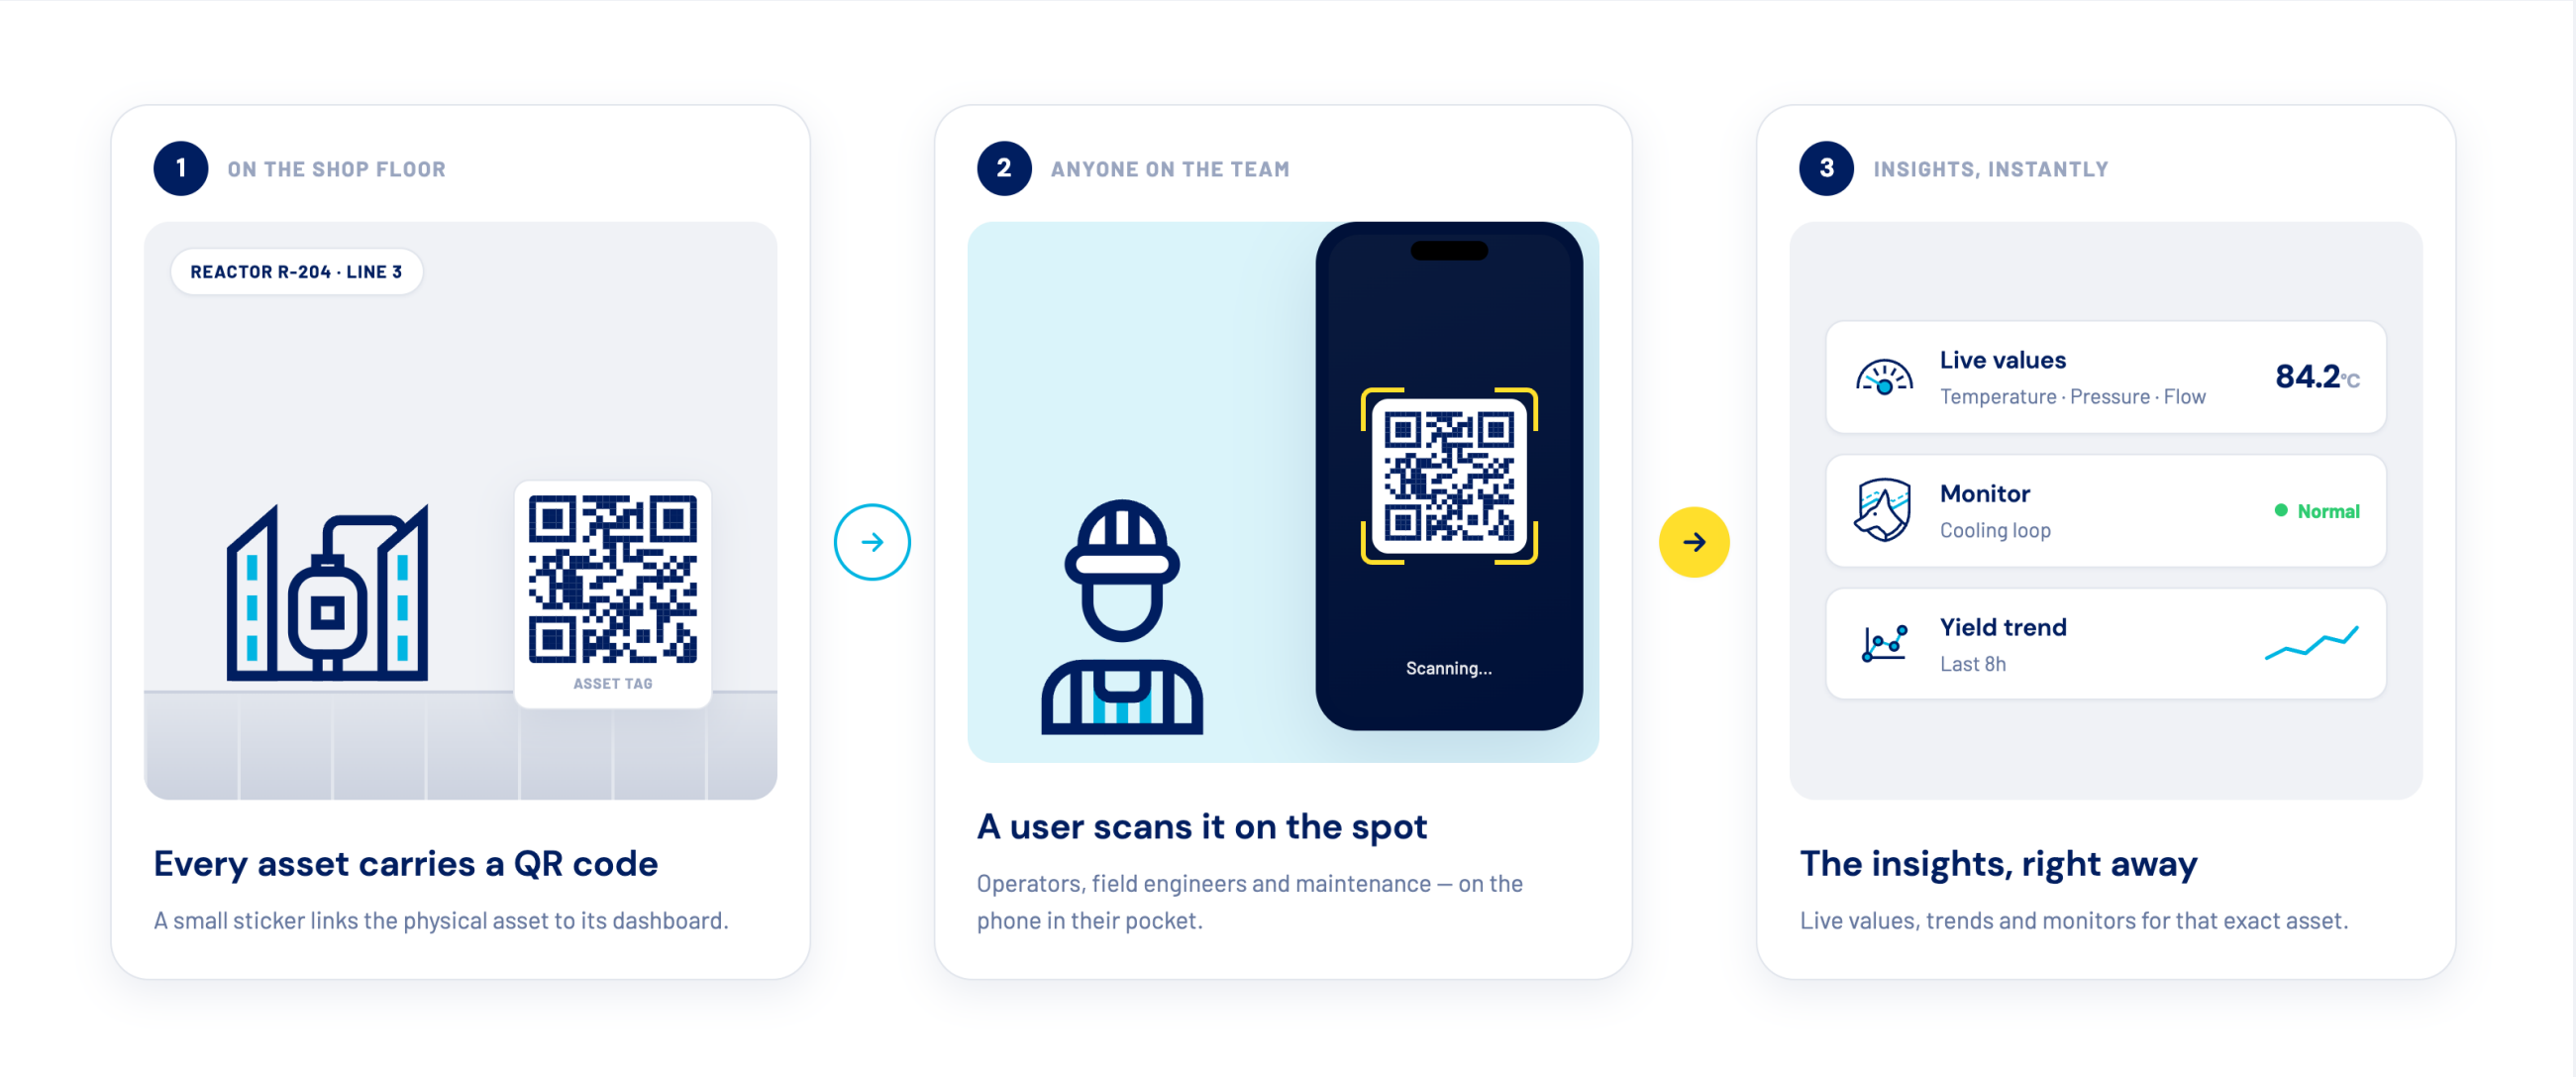

Process insights for everyone on the work floor. Log in on your phone and open the right dashboard the moment you need it.

- The insights you need, on the phone already in your pocket.
- Live values and trends, wherever the work happens.
- Consult process data right at the asset, the moment a question comes up.

Scan the asset, get the insight

On the shop floor, point your phone at the QR code on an asset and its TrendMiner insights are right there. The right data, on the right asset, without searching for it.

BONUS ITEMS

Additional Enhancements

Improvements based on your feedback.

ADDITIONAL ENHANCEMENTS IN 2026.R2

Smaller refinements across the product

Dashboarding

- Presentation mode by default, with a Quickstart toggle.
- Optimized axes on narrow tiles
- Iframe embedding improvements
- URL targets in text tiles

Work Organizer

- Discoverable share links for easy sharing.
- Resizable columns
- Harmonized action menus

Analytics & monitoring

- More accurate fingerprint scores detect deviations sooner
- End Date hidden by default in Event Analytics
- Higher-resolution collapsed plotting and cleaner Event Analytics result

...plus enhanced Plant Integration logging, Context View URL filters, Canary API-key auth, and extended Proficy Historian support, Plug 'n play connector to Proficy Cloud

UPCOMING

Events & News

See the new release on your own data and talk through what the upgrade looks like for your plant.

Join us at TrendLab 2026

Two days per region: hands-on workshops for users and administrators, followed by a day of customer talks, product direction, and what's next for industrial analytics.
